# What do YOU want from YOUR netting system ?

## Sport and Leisure Nets

Borisnets designs, install and maintain a comprehensive range of multifunctional training courts delivering great value for club, county and regional playing squads.

### Leisure Centres & Sports Centres

Whatever the level of ability or choice of sport, multipurpose sports halls are a cost effective venue for a variety of drysports. From grass roots and community led sports initiatives upwards, these courts are designed to make the

best use of space and to maximise the revenue opportunity from the sports hall or sports fields. These modular court systems enable sports such as Cricket, 5 aside Football, Basketball, Volleyball, Badminton, golf, trampolining etc to be played simultaneously side by side.

Cross court and walkway containment is effected by a net canopy, additional net curtains are clipped into place depending upon the need for rapid reconfiguration and the tracking system layout. Through careful design the netting can also protect internal lighting and public address systems.

The suitability of these designs has been established within 5 aside football. Each team play in their own contained area using a system of interlocking kickboards. Depending upon the physical nature of the sport and the need for flexibility the kickboards can slot into a plug and socket system direct into the pitch surface, allowing for any size and amount of courts to be created.

The modular nature of the design enables club requirements to be satisfied, whilst allowing for bespoke, retrofit or upgrade options to be taken into account at an operational level. The kickboards can be removed for storage, the netting drawn back if larger space is needed. All materials are designed for long term operation with constant use in mind leaving staff free to concentrate on their day to day responsibilities.

## Sports Safety and Protection Netting

Public Safety is a specialist area of expertise to Boris Nets. Working alongside your designers and architects Boris Protective Barriers elegantly & effectively prohibits the public from putting themselves into danger whilst on your premises.

For example home to the world's longest waterslide, the Sandcastle at Blackpool is a place of fun for all. Boris Nets has carefully installed protection netting around the various waterpark attractions, waterslides and other structures so families and friends can play safely.

Netting systems can be designed to take the worst case scenario impact whether from an ice hockey puck, cyclist racing around a velodrome track or simply to create a better architectural space in a cafe area.
